

ABSTRACT

SUSPENSION OF INORGANIC FILLERS IN A POLYESTERPOLYOL AND
PRODUCTION METHOD

The present invention relates to a suspension of an inorganic filler in a polyesterpolyol and the method for producing this suspension. It relates more especially to a stable suspension comprising, as liquid medium, a polyesterdiol compound and, as dispersed particles, an inorganic particulate filler at a weight concentration of between 0.8 and 8%. Such suspensions are used, for example, for producing polyurethanes such as polyurethane foams or thermoplastic polyurethanes.
